

Key Findings & Recommendations

01 | Contract type

Month-to-month customers had a 42.71% churn rate, compared with 11.27% for one-year contracts and 2.83% for two-year contracts.

Recommended action: Test voluntary incentives for longer-term plans and measure their impact on retention.

02 | Customer tenure

Customers with 1–12 months of tenure had a 47.68% churn rate, compared with 9.51% among customers with 49+ months.

Recommended action: Test onboarding improvements and proactive support during the first year, then evaluate their impact on retention.

03 | Priority segment

Fiber-optic customers with month-to-month contracts and 1–12 months of tenure had a 70.20% churn rate (643 of 916 customers). This segment represented 13.01% of all customers but accounted for 34.40% of all churned customers.

Recommended action: Prioritize this segment for customer feedback and a retention pilot. Compare results against a control group before expanding the program.

Analysis note: Findings reflect the full dataset and do not update with dashboard filters. These associations do not establish causation; recommended actions should be tested before implementation.
